DRAFT

3/20/2375/FUL | Demolition of outbuildings, erection of 3, two bedroomed dwellings, 3, three bedroomed dwellings and 2 four bedroomed dwellings, conversion of barn to dwelling. Change of use of Long Barn from Cafe/Retail (A1/A3) to ancillary residential use. Erection of new use class E building. Part demolition and reconstruction of front wall, with associated landscaping, parking and provision of access road. | Land To The Rear Of Hopleys High Street Much Hadham

In the Parish Council's two responses to planning application 3/20/2375/FUL, the Parish Council's support has been conditional on, inter alia:

confirming that the surface water drainage management for both the sloping access drive and the link into Victorian soil drainage system in Hop Lane are sufficient to cope with any foreseeable flood event and would not result in flooding on to the High St, as happens currently;

The Parish Council has, therefore, read with interest the recent submission by the applicant's agents in response to the concerns raised by the Lead Local Flood Authority and wish to expand on our comments in relation to this issue.

With regards to surface water drainage, it remains the applicant's position that the existing connection to the drain at the north-east corner of the site continue to be used. It seems that the ownership of the drain beyond the connection is unknown and that there is no express permission to use it, the applicant perhaps relying on a prescriptive right through long usage. This is unsatisfactory as it means there is no mechanism for dealing with any issues in Hop Lane arising from the surface water drainage of the development, such as blockages.

Secondly, there appears to be no provision for improving the surface water drainage down the drive to the High St, with simple reliance on the existing surface said to be permeable. However, such a surface is much less effective when on a relatively steep slope, causing water to cascade on to the High St. The opportunity should be taken to install as a minimum at least one and preferably two full width channels to prevent run off on to the highway.

Finally, there are no detailed plans for foul water management. Existing drains appear to link into the main sewer under the highway to the south west of the site. Whether the development uses the existing sewerage (which seems unlikely as the capacity is unlikely to be sufficient) or new sewerage is installed, perhaps down the drive to the High Street, it seems odd that the surface water drainage will be running in the opposite direction. One would naturally expect for ease of trench digging, economy, etc that they would flow in the same direction to follow the natural contours of the site, with the surface water also exiting the site via the drive and not via Hop Lane.

Decision to approve this submission made by email and will be ratified at the Much Hadham Parish Council Planning Committee meeting 2nd November 2021.
